

the argument and certainly should not because you can take half the cells away in identical twins and obviously it has not hurt the embryo at all, so why should taking a cell out of the embryo make any, yeah, I know, but it just might. So you need to do some work with that to make sure it does not hurt the embryos. There is always an outside chance that the person lives to be 90 and they determine some defect that was as a result of taking the cell out earlier.

So the suggestion was made by Mr. Dortlinger that, gee, the first thing you do with that cell you take out is to make a repair kit. Wow, why did I not think about that? It is obviously such a right thing to do. What you do to that cell now is to make your replacement, which by the way is what parents are hoping to sort of do when they freeze umbilical cord blood. Now, those are not embryonic stem cells in umbilical cord blood. They are adult. So when the baby is born it is an adult. As a matter of fact, the day you are born is the day you start to die. Things start to go downhill from the day you are born. So these are adult stem cells, but they have characteristics that may be more amenable to alterations, to modifications than adult stem cells taken from a 50-year-old.

By the way, there has been a new technique which some heralded, now we do not need to think about embryonic stem cells because you can take amniotic fluid, and as the baby is growing from the earliest stages on, but it has to be in amnion before you can get these cells in the amniotic fluid. You can get some embryonic stem cells there, and so a big push was made, gee, let us stop talking about embryonic stem cell research because now we have got these stem cells from amniotic fluid.

But the person who discovered that made the observation that this was complementary to embryonic stem cells and should not be considered in place of embryonic stem cells. It is certainly a good place to get cells that are more easily reprogrammed to believe that they are not what they are at that stage of development, but he said that it should be considered complementary to embryonic stem cells and not in place of stem cells.

Well, the Senate is going to vote on this in a few days now; that is, they are going to vote on the Castle-DeGette bill. It will certainly pass, and I think they are voting on exactly the same bill. So it does not even need to go to conference. It will then go to the President, and the President will do what he did in the last Congress. He will veto the bill.

So here we will be with only a few embryonic stem cell lines running out. They are all contaminated with mouse feeder cells, and so they may or may not be amenable to actual therapy, but in any event, these stem cell lines do run out. With the enormous potential that many people believe embryonic

stem cells have, we will be in a situation where there is only a few embryonic stem cell lines which are running out and a public out there which is demanding and they come to our office. One of those compelling things are these kids with this big thing in their body like a hockey puck which is pushing insulin because they have juvenile diabetes, and they are very brittle and they have to trickle that in little by little during the day to maintain the status quo.

So here we will be with embryonic stem cell lines running out, with a cry from the public and the professional part of the public that we need to move on with this. My hope is that when the President has vetoed this bill, the Castle-DeGette bill, he will, he did last time and he will again, that then they pass our bill which was passed 100-0 in the Senate last year, by 273 votes in this House. In fact, they got more votes than the one that is being sent on to the President from this House. So, hopefully, that bill will come up next and can move to the President's desk, and he will certainly sign that bill and we can get on with ethical embryonic stem cell research.

Mr. Speaker, I would hope that all of our listeners out there who have a Representative that they believe may not be supportive of this, would they please contact that Representative and urge them to support this bill. It will provide ethical embryonic stem cell research. Neither I nor any of the others know what the ultimate result of this will be, but I will tell you the potential for clinical cures and application because of embryonic stem cells being what they are has to be greater than adult stem cells.

Mr. Speaker, let us hope that we can move this clock very quickly because there are a lot of people out there that need this kind of help.
